Headshell Lead Wire

CL-1

Let your cartridge sing full colour

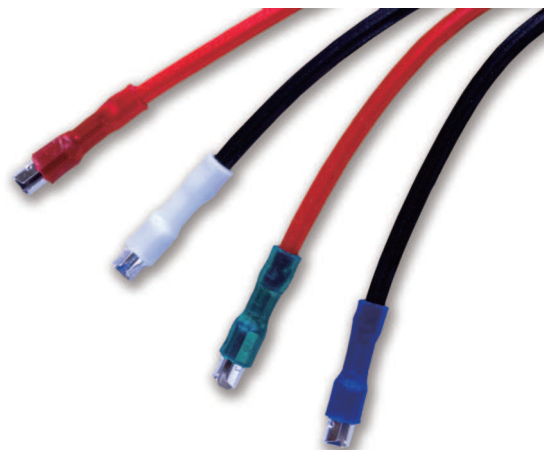

Introducing the CL-1 headshell lead wire, the standard for Dynavector cartridges, engineered for pure, un-compromised signal transmission using ultra-fine, high-purity copper wires, identical to our acclaimed CP-1 phono cable, the CL-1 ensures transparent, neutral, high resolved sound and effortless installation, unlocking the full potential of any cartridge.

Ultra Fine Stranded Conductor

The CL-1 features high-purity copper wire, made up of countless strands, thinner than 50 microns, achieving an ideal balance of signal fidelity & flexibility. Its pure copper conductor delivers smooth, natural tonal balance that complements any cartridge.

Rhodium Plated Connectors

Terminal pins are rhodium plated for clean, reliable connectivity. Harder & thinner than gold or other materials, rhodium minimizes sonic coloration making it ideal for those seeking pure and precise sound.

Specifications

Conductor	under 50 μ ultra-fine copper wire
Connector	Inner diameter 1.2 mm / 1.0 mm
Cable Length	40 mm
